

MagniLink Student

new generation

- brilliant 3rd generation
- extraordinary image
- quick setup
- text to speech

MagniLink Student

The **NEW GENERATION MAGNILINK STUDENT** is everything you have come to expect and more from one of the most highly regarded portable products in use today! Easily carried between home, school or work, and can be deployed in seconds. It comes with the latest technology, making it easy and fast to connect to a computer - or directly to a monitor. And of course the image quality is the best available. Plus it can even read text aloud!

Extraordinary image quality

Choose SD or HD camera. All cameras have superior image quality with unbeatable sharpness, light sensitivity and viewing angle. The MagniLink Student offers 60 digital full frames/second (fps) and thanks to the USB 3.0 connection the image is extraordinary. USB 2.0 is supported.

Easy to use

All functions are controlled directly from the computer's keyboard - or from the MagniLink Student's control panel.

It's easy to toggle between the reading/distance camera and the mirror mode. The camera head can rotate horizontally and vertically offering exceptional flexibility.

Powered by the computer

Connect to a monitor or a computer through the built-in HDMI/USB 3.0-ports. The system is powered by USB from the computer – there is no need for extra cables or battery charging.

Text to Speech (TTS)

Add OCR functionality (Text to Speech) and text can be read aloud increasing reading speed and reading endurance. The TTS function reads any printed text by sentence, by word or by paragraph.

The advanced Text to Speech synchronization feature allows the user to change the image magnification, color and contrast as the text is spoken. All together, the user can optimize the text on the screen making it easy listen and read along, or to lean back and simply listen to the printed text.

Features & benefits

- **Small footprint**
New design allows the system to be placed tightly to a laptop or monitor.
- **Foldable**
With collapsible and flexible legs, the system can easily be deployed and packed in the included bag together with a 15,4" PC.
- **Quick setup - true plug & play**
Set up or fold the unit in seconds - makes MagniLink Student always accessible.
- **The latest technology**
MagniLink Student is full of the latest technology. Among other, USB3 port (about 10x faster than USB2), HDMI connection to the monitor, latest camera technology and all new software.
- **Compatible with MAC/assistive software**
MagniLink S is compatible with MAC (except MLS TTS) and assistive software as iMax (MAC), ZoomText, SuperNova (PC).
- **Increase the line of sight**
The periscope function provides extra height for distance camera.
- **Free working height**
31 cm free working height makes it easy to browse not only books but also binders.

Accessories

- MagniLink Reading Table - a portable external reading table.
- MagniLink docking station - a high quality reading table that turns the unit to be a full video magnifier.
- External control box.
